URMA AG takes over exclusive Swiss representation of EMCO CNC machines

URMA AG is expanding its range of CNC machines with the portfolio of EMCO GmbH. The integration of the EMCO CNC machine portfolio strengthens URMA AG's position as one of the leading providers of high-quality solutions for the manufacturing industry in Switzerland and Liechtenstein.

URMA AG is pleased to announce that the company will take over the Swiss-wide sales and service of EMCO CNC machine tools on May 1, 2024 as an ideal addition to the existing machine portfolio. This change will be carried out in close partnership with Argonag AG and EMCO Werkzeugmaschinen AG (Switzerland) to ensure a smooth transition. URMA AG will integrate the employees of Argonag AG and EMCO Werkzeugmaschinen AG (Switzerland) at its headquarters in Rapperswil.

With a focus on meeting demanding machining requirements, URMA AG has expanded its offering with the comprehensive portfolio of EMCO GmbH, which stands for the best individual, automated complete solutions for both turning and milling. EMCO CNC machines offer a wide range of functions and are specifically designed to meet the complex requirements of the manufacturing industry, especially in areas that demand outstanding performance. Standout features include multi-task and turn-mill centers with twin turrets, triple turrets and simultaneous machining with counter spindles. These state-of-the-art machines enable customers to produce the most complex parts with maximum efficiency and precision.

The demand for high-precision and efficient processing machines is high in the Swiss manufacturing industry. "The expansion of our CNC machine portfolio underlines our commitment to continuous development and customer satisfaction," says Oliver Berner, Member of the Executive Board at URMA AG. "We are proud to offer our customers solutions for all machining applications and materials with our comprehensive portfolio."

URMA AG has been active in the machine trade for over two decades and has gained extensive experience in trading CNC machines and machines for additive manufacturing. The many years of experience in the Tools Division's own production enables URMA AG to understand customer needs and applications and to provide interested parties with the best possible advice. URMA AG is convinced that the clear sales strategy, qualified sales staff, in-depth product and market knowledge and strong customer focus offer added value for the sale of EMCO CNC machines in Switzerland.

About EMCO GmbH

EMCO was founded in 1947 and is headquartered in Hallein near Salzburg. The company employs over 800 people at five production sites in Austria, Germany, and Italy. EMCO has been part of Kuhn Holding GmbH since December 2011.

EMCO is regarded as one of the leading manufacturers of machine tools in Europe and is known for high-quality, customized automated solutions in the field of turning and milling. The product range includes a wide variety of machines, from conventional lathes and milling machines to CNC turning and milling centers and vertical machining centers to fully automated production cells.

The key success factors of the internationally active company are the commitments "Made in the Heart of Europe" and "Design to Cost". These principles stand for first-class European manufacturing quality and a functional design approach.

About URMA AG

URMA AG develops and manufactures precision tools that are used worldwide for precision drilling and milling operations. The innovative tool systems increase process reliability and contribute to increased efficiency. URMA AG has its headquarters and a production facility in Rapperswil (AG). For over 60 years, the Swiss family-owned company has been operating globally with around 150 employees in various subsidiaries, OEM partnerships, and a broad sales network.

URMA AG has been successfully selling CNC machine tools from HAAS Automation in Switzerland and Liechtenstein for over 20 years. Thanks to its well-positioned service and sales organization, URMA AG has already been named the best HAAS dealer in the world. In 2024, URMA AG added the ZORN Microone to its CNC machine portfolio in the field of micro-machining, particularly for applications in the watchmaking and medical industries. By offering EMCO products for high-precision and complex CNC machining, URMA AG offers a comprehensive machine portfolio for machining production.

In Switzerland, in addition to 3D printing systems from Markforged and EOS, URMA AG also distributes a broad portfolio of machines for the finishing of components and covers the entire additive manufacturing production chain.
